AI Cartoon Series — Golu & Chiku

Saare Prompts

Poore course mein chat G.P.T ko bheje gaye saare messages. Flow ke image aur video prompts chat G.P.T khud likhta hai — tum unhe copy karke Flow mein paste karte ho. [Brackets] mein apni series ki details daalo.

Kaise use karein

- Saare messages **ek hi chat G.P.T chat** mein order se bhejo — taaki use characters, Master Style line aur locations yaad rahein.
- chat G.P.T jo Flow prompt de, usse hubahu copy-paste karo. Image: Flow → Image → Nano Banana Pro. Video: Flow → Video → Frames (start frame ke saath).
- Har image/video mein sahi references upload karo: character sheet(s) aur location image.
- "Keep exactly the same", "no text", "ONE action" jaisi lines kabhi mat hatao.
- Result achha na aaye toh wahi start frame rakh ke 1–2 baar aur generate karo.

Master Style line (example)

Har image aur video prompt ki pehli line

```
Style: Soft, colourful, high-quality 3D animated kids' cartoon, rounded character shapes, smooth clay-like textures, warm gentle lighting, expressive oversized eyes, friendly Indian children's animation aesthetic, clean polished rendering, consistent character proportions.
```

Lesson 02 — Characters (chat G.P.T, ek hi chat mein)

Step 1: Character design

```
I'm making a short animated cartoon series for Indian kids aged 3–8. Help me design the two main characters.

1) [Character 1 – e.g. Golu, a 6-year-old Indian boy who lives in a small mohalla in an Indian city]
2) [Character 2 – e.g. Chiku, Golu's pet squirrel and best friend]

For each character give me: personality in 3 words, one funny habit or catchphrase in simple Hindi, a simple outfit/look with exact colours, and face and body details. Keep the look simple so AI can repeat it every time – plain clothes, no logos, no patterns, no text on clothes.
```

Step 2: Sheet ke prompts + Master Style line

```
Now write ready-to-paste prompts for Google Flow's image generator (Nano Banana Pro) to make a character reference sheet for each character.

Rules for both prompts:
- Start each prompt with one fixed "Style:" line for a soft, colourful 3D animated kids' cartoon look. Use the EXACT same Style line in both prompts — I will reuse it in every future prompt.
- Layout: plain light-grey background; top row = four full-body views (front, three-quarter, side profile, back); bottom row = four face close-ups (happy, surprised, sad, angry).
- Every view must be exactly the same character.
- 16:9, no text, no labels, no background scenery.

Give me the [Character 1] prompt and the [Character 2] prompt in separate code boxes, and the Style line separately at the end.
```

Step 3: Test scene (dono sheets upload)

```
Now write one Nano Banana Pro prompt where I upload both character sheets as reference images. Scene: [simple scene — e.g. Golu happily running across a small green park in an Indian neighbourhood on a sunny morning, with Chiku sitting on his shoulder]. Tell the model to keep both characters exactly the same as the sheets. Use the same Style line. 16:9, no text.
```

Galat example — bina sheet (sirf comparison)

```
A cute Indian boy named Golu playing in a park, cartoon style.
```

Lesson 03 — Locations

3 locations ke prompts

```
Now let's build [Character]'s world. Write ready-to-paste Nano Banana Pro prompts for 3 locations where our episodes will happen:

1) [Location 1 — e.g. Golu's home — a small, cosy Indian living room]
2) [Location 2 — e.g. Golu's mohalla — a narrow, colourful Indian neighbourhood street]
3) [Location 3 — e.g. Golu's school — a cheerful classroom in a small Indian school]

Rules:
- Start every prompt with our exact Master Style line.
- Empty scenes — no people, no characters, no animals.
- Simple, clear layout that is easy to repeat in every episode.
- Wide 16:9 shot, no text, no signs with words.

Give each prompt in a separate code box.
```

Test: characters + location

```
Now write one Nano Banana Pro prompt where I upload 3 reference images: [Character 1]'s sheet, [Character 2]'s sheet, and the [location] image. Scene: [e.g. Golu is sitting on the sofa reading a picture book, and Chiku is peeking out from behind a cushion]. Keep the room exactly the same as the location image and both characters exactly the same as their sheets. Use the Master Style line. 16:9, no text.
```

Galat example — bina style/reference (sirf comparison)

```
Golu's house in India.
```

Lesson 04 — Kahani

Step 1: Episode ki kahani

```
Now let's write [Character]'s first episode: "[Episode title — e.g. Chiku Aur Gayab Laddoo]".

- Length: about 60 seconds when animated
- For kids aged 3–8: simple, funny, warm, nothing scary
- Story: [one-line story — e.g. a laddoo goes missing at home, Golu thinks Chiku ate it, but the truth turns out to be different]
- Moral: [e.g. don't blame someone without checking first] — say it simply at the end
- Use only our 3 locations
- Use both catchphrases at least once
- Very simple Hindi words that small kids understand

Write the story in short Hindi (Devanagari), like a storybook.
```

Step 2: Scene table

```
Now break this story into 7–8 scenes of 8 seconds each, as a table with these columns: Scene no. | Location (only our 3) | Characters | What happens (only ONE simple action) | Dialogue (who speaks + max 10 simple Hindi words) | Camera (wide / medium / close-up)

Rules: one action per scene, short dialogue that fits in 8 seconds, and the story must flow clearly from scene to scene.
```

Step 3: Kid check

```
Now check this episode for kids aged 3–8: is anything scary, unsafe, rude or confusing? Are any words too hard? Fix those parts and give me the final scene table again.
```

Galat example — nayi chat mein (sirf comparison)

```
Bachon ke liye ek kahani likho.
```

Lesson 05 — Pehla Scene

Step 1: Start frame prompt

```
Let's turn Scene 1 of our episode into a video. First I need a START FRAME image.

Write one ready-to-paste Nano Banana Pro prompt for the first frame of Scene 1. I will upload 2 reference images: [Character]'s character sheet and the [location] image. Show the exact moment the scene begins — [e.g. Golu in the living room, looking at a plate with two round laddoos]. Keep the character and the room exactly the same as the references. Use our Master Style line. 16:9, no text.
```

Step 2: Scene video prompt (Frames mode)

```
Now write a Google Flow video prompt for Scene 1 (8 seconds) that starts from this start frame.

Rules:
- Only ONE simple action from our scene table
- Keep the character, the props and the room exactly as in the start frame
- Simple camera (tell me which)
- No dialogue yet — only soft ambient sounds
- Same Master Style line
```

Step 3: Agla scene

```
Now do the same for Scene 2: first the start frame prompt (same references), then the 8-second video prompt. One action only, no dialogue yet.
```

Lesson 06 — Poora Episode

Voice bible + 8 scenes ki production sheet

```
Now let's produce the full episode "[Episode title]" with voices.

Part A — Voice bible: write ONE fixed English voice line each for [Character 1], [Character 2] and a warm narrator (tone, pitch, speed, energy, fun cartoon style). I will paste these exact lines into every video prompt so the voices never change.

Part B — Production sheet for all 8 scenes from our final table. For each scene give me:
1) Start frame: either a ready Nano Banana Pro prompt (say which references to upload: character sheets / location image), OR write "Use last frame of Scene X" if the scene continues directly from the previous one.
2) An 8-second Google Flow video prompt with: our Master Style line, ONE action, the Hindi dialogue from the table, the exact voice line of whoever speaks, a TIMING block, and "only [character] speaks".

In Scene 8, add the narrator saying the moral at the end.
Keep every prompt in its own code box, scene by scene.
```

Lesson 07 — Rhyme + Troubleshooting

Original rhyme + production sheet

```
Now let's make a short ORIGINAL rhyme video for our series: "[Rhyme title — e.g. Chiku Ki Chhalaang]", set in [location].

Part A — Write a 4-verse Hindi rhyme for kids aged 3–8 (Devanagari). Each verse = 2 short lines that rhyme, easy to sing in 8 seconds, with a bouncy nursery-rhyme rhythm. Both characters appear. Fully original — do not copy or imitate any famous rhyme.

Part B — Production sheet for 4 clips (one verse per clip, 8 seconds each). For each clip give:
1) Start frame: a Nano Banana Pro prompt (say which references to upload), OR "Use last frame of Clip X" if it continues.
2) A Google Flow video prompt with our Master Style line, ONE simple action that matches the lyrics, the verse sung in a cheerful nursery-rhyme melody on a steady beat, the exact voice line from our voice bible for whoever sings, a TIMING block, and "no background music" (I'll add music later).

Each prompt in its own code box.
```

Troubleshooting table

```
Make me a quick troubleshooting table for Google Flow cartoon videos with 3 columns: Problem | Why it happens | Exact line to add or change in the prompt.

Cover: character's face or outfit changes, extra or merged fingers, voice changes between clips, lip-sync is off, character size or room changes between scenes, random text or signs appear, extra characters appear, the action is too fast or too much.
```

Lesson 08 — Publish

Thumbnail prompt

```
Write a Nano Banana Pro prompt for a YouTube thumbnail for [Episode title]. I will upload [Character 1]'s sheet, [Character 2]'s sheet and one frame from the episode as references. Make it bright and eye-catching for kids: [e.g. Golu with a big surprised face, Chiku peeking cheekily, the laddoo clearly visible], simple background, 16:9. Add only this short text in big bold Hindi letters: "[short text — e.g. Laddoo kahan gaya?]" — nothing else.
```

Title, description, tags + Made for Kids

```
Now write a YouTube title, a short description and 10 tags for this episode. Kid-friendly, honest — no clickbait, no fake claims. Also explain in simple words what the "Made for Kids" setting on YouTube means for this video.
```

Agle 10 episodes + schedule

```
Plan the next 10 episodes of [series name]: for each give a title, a one-line story and a simple moral. Use only our characters and our 3 locations so I can reuse all sheets. Also suggest a simple, realistic posting schedule for one person.
```

Troubleshooting — quick fixes

Problem	Kyun hota hai	Prompt mein kya daalo
Chehra ya kapde badal gaye	AI har frame/clip mein character dobara banata hai	STRICT CHARACTER LOCK: reference jaisa exact chehra, baal, skin, kapde, proportions — koi redesign nahi
Extra ya judi hui ungliyan	Chhote haath aur complex gestures mushkil	HAND ANATOMY LOCK: har haath mein exactly 5 ungliyan, gestures simple
Clips mein awaaz badal gayi	Har generation alag awaaz bana sakta hai	VOICE IDENTITY LOCK: voice bible ki exact line har clip mein; zyada pakka chahiye toh fixed audio CapCut mein
Lip-sync off	Dialogue lamba ya bahut tez	Chhota dialogue + lip-sync line: munh tabhi chale jab awaaz ho
Size ya kamra badal gaya	AI har baar background naya banata hai	SCALE AND ENVIRONMENT LOCK + location image reference mein
Random text/board aa gaye	AI books, deewar pe likh deta hai	NO TEXT RULE: koi letters, numbers, signs, watermark nahi
Extra characters aa gaye	AI background bharne ke liye log daal deta hai	CHARACTER COUNT LOCK: sirf naam diye gaye characters
Action bahut tez/zyada	8 sec mein bahut kuch	ONE ACTION ONLY + TIMING block, static camera
