

Bottom Navigation Restored to Pulled Main Version

Comparison of the intermediate conflict-resolution build and the corrected build that uses the exact bottom navigation from origin/main.

Previous local five-tab bar

Pulled main four-tab bar

Change applied

- Removed the locally preserved Profile tab from BottomNav.
- Restored the pulled order: Home, Explore, Nex AI, Downloads.
- Restored the pulled 25 percent width allocation for four equal tabs.
- Left swipe navigation and unrelated Home UI changes untouched.

Verification

- Expo Android embedded bundle: passed.
- Gradle assembleDebug: passed, 204 tasks.
- APK install and app relaunch: passed.
- Pixel visual QA: four tabs visible, correctly ordered, evenly spaced, and not clipped.
- No React Native error overlay was present.
