

Marketing Web Route - Build Comparison Report

Date: 01 October 2026

Summary

A clean website route was added so the existing marketing homepage can be opened directly at /marketing-web on the frontend dev server. The implementation reuses the current HomePage marketing experience instead of duplicating content.

Version Comparison

Area	Previous Version	New Version
Public route	Marketing homepage was available through / and index.html.	Marketing homepage is also available through /marketing-web.
Route mapping	No marketing-web route key existed in the clean route map.	marketing-web.html maps to the clean path /marketing-web.
Page loading	HomePage loaded only from the index.html route key.	HomePage also loads for the marketing-web.html route key.
User-facing result	No separate URL used the marketing-web name.	Users can open http://localhost:5173/marketing-web directly.
Build output	Existing Vite build generated the standard dist bundle.	Fresh Vite build completed successfully after the route change.

Code Changes

- edunex-f/src/lib/routes.js: added marketing-web.html to cleanRoutes with the path /marketing-web.
- edunex-f/src/lib/pageLoaders.jsx: added marketing-web.html to reuse the existing HomePage component loader.
- No unrelated user changes were reverted. Existing appcopyai/App.js worktree changes were left untouched.

Testing And Verification

- npm run build completed successfully in edunex-f.
- Vite dev server started on http://localhost:5173/.
- HTTP HEAD check for http://127.0.0.1:5173/marketing-web returned 200 OK.
- Build emitted only the existing large chunk size warning from Vite; no build failure occurred.

Result

The marketing web page is now reachable at /marketing-web on frontend port 5173 while preserving the existing homepage route at /.
