

Skillomate Admin Panel V2 Comparison Report

Date: 2026-09-16

Scope: Comparison of the earlier admin redesign pass against the latest real-values-only cleanup.

Summary

Area	Previous admin V2 state	Latest state
Dashboard values	Main totals came from live admin APIs, but some percentage labels were frontend-computed as relative ratios.	Frontend-computed comparison labels were removed. Dashboard cards now show only values returned by live APIs or clear Not returned text.
Trend charts	Course completion mini chart could fall back to a single completion percentage when daily completion data was not returned.	Mini charts now render only fields present in live dailySeries data. Missing fields show No live trend data returned.
Missing backend workflows	Some pages used placeholder wording for review, subscriptions, settings, and learner detail tabs.	Copy now states Backend API not connected where mutations or per-learner records do not exist yet.
Bulk course actions	Bulk actions said selected changes were staged.	Bulk actions now say a backend bulk endpoint is required and no course data was changed.

Live Data Sources Kept

- Dashboard analytics continue to load from `/api/admin/analytics`.
- Learners, subscribers, and progress views continue to use `/api/admin/user-management`.
- Course library and review data continue to use `/api/admin/courses` and `/api/admin/courses?summary=1`.
- Certification counts continue to use `/api/admin/certifications?page=1`.
- Payment and environment readiness continue to use `/api/admin/system-health` where available.

Backend Still Needed For 100 Percent Real Workflows

- Previous-period analytics if you want real percentage comparisons instead of removed frontend ratios.
- Paginated `/api/admin/orders` with refunds, export, and search.
- Subscription mutation and audit endpoints.
- Learner-specific orders, certificates, activity, and audit history.
- Bulk course operations and review-state persistence.
- Course-level pricing, SEO tags, featured flags, and certificate toggles.
- Profile/settings mutation endpoints.

Verification

- Ran `npm run build` in `edunex-f` successfully.
- Searched admin source for `demo/mock/staged/frontend-placeholder` comparison wording after cleanup.
- Kept the running admin frontend and backend services unchanged on localhost ports 5173 and 3000.

Prepared by Codex for the Skillomate admin real-values-only cleanup.
