

Marketing Local Static Route Hotfix Comparison

Date: 2026-10-05

Summary

This hotfix addresses the localhost screenshots where `/marketing-web` and `/static-pages/skillomate-ai-influencer-courseweb/#paywall` could fall back to the Vite SPA or load malformed `_next` asset URLs. The new build resolves the marketing export from the Vite config file directory, redirects legacy `/marketing-web` directly to the static paywall URL, and keeps `#paywall` as the open checkout state.

Before vs New Build

Area	Previous behavior	New behavior
Local static serving	Vite middleware used <code>process.cwd()</code> , so launches from <code>marketing-web</code> directory, could miss <code>marketing-web/</code> puts and assets	Vite resolves <code>marketing-web</code> from <code>marketing-web/</code> directory, puts and assets
Legacy <code>/marketing-web</code>	Local redirect could land on the static page without <code>#paywall</code>	<code>/marketing-web</code> and <code>/marketing-web.html</code> now redirect to <code>/static-pages/skillomate-ai-influencer-courseweb/#paywall</code>
Malformed assets	Chrome could request <code>/static-pages/skillomate-ai-influencer-courseweb/_next</code> and receive 404	Local <code>marketing-web/_next</code> and <code>marketing-web/_next/</code> are normalized to <code>courseweb/_next</code>
Paywall hash	The checkout hash was consumed and removed after <code>Open pay</code>	The paywall hash is kept as the canonical open-checkout state

Verification Performed

- `npm run build` completed successfully.
- `deployment/test-frontend-s3-deploy.sh` passed.
- Route assertions confirmed `/marketing-web` resolves to `/static-pages/skillomate-ai-influencer-courseweb/#paywall`.
- Local HTTP checks confirmed `/marketing-web` returns a 301 to the static paywall URL, the marketing CSS asset returns 200 OK, and malformed `courseweb/_next` assets redirect to `courseweb/_next`.

Remaining Note

The local frontend dev server was restarted on port 5173 after the middleware change. Browser cache may still need a hard refresh if an older `/marketing-web` HTML response is cached in Chrome.
