

Skillomate production target update

Before/after deployment configuration report | 22 September 2026 | Configuration-only change

CHANGE SCOPE	3 production targets updated	DEPLOYMENT	Not executed
--------------	------------------------------	------------	--------------

Target comparison

Instance	Previous target	New target	Instance class
EC2 #1	43.205.137.167	13.235.104.167	m7g.large / ARM64
EC2 #2	13.235.24.15	3.108.8.89	m7g.large / ARM64
EC2 #3	13.127.170.170	13.201.21.124	m7g.large / ARM64

Files changed

- /Users/kratik/deploy-skillomate-production.sh
- deployment/deploy-skillomate-production.sh
- deployment/test-rolling-deploy.sh
- deployment/README.md

Preserved safeguards - Sequential rolling order: EC2 #1, then EC2 #2, then EC2 #3. - Local deployment lock and per-instance remote lock behavior. - One exact 40-character origin/main commit pinned for the entire run. - Immediate stop on any instance failure; later instances remain untouched. - Automatic rollback of the failed instance to its previous commit. - PM2 restart with --update-env and PM2 state save. - /api/ready and /api/courses validation, plus health and runtime checks. - Final deployed Git commit verification against the pinned commit.	Verification performed - Bash syntax validation passed for all deployment and test scripts. - Rolling deployment self-test passed using fake SSH only. - Rollback self-test passed in a temporary non-production repository. - Both production orchestrator copies are byte-identical. - Old target IPs are absent; only the three new targets remain. - No SSH connection or deployment command was executed.
READY TO DEPLOY	Configuration verified; deployment intentionally not started.
