Course and Lesson Descriptions

Course description

Learn to create, review and publish a WhatsApp-focused landing page for a local business using ChatGPT, Google Flow, VS Code, Chrome and Netlify. Follow the Sweet Crumbs home-bakery demonstration from planning and copywriting through images, HTML, mobile improvements and publishing. Then build a truthful portfolio and practice finding and communicating with prospective clients. The course emphasizes accurate business details, genuine reviews and realistic expectations; it does not promise sales or income.

Lesson 01 — Course Introduction

Define a landing page, its single conversion goal and the full no-code course journey.

Lesson 02 — Page Planning

Turn verified business details into an offer, page outline and final headline.

Lesson 03 — Landing Page Copy

Write useful text for every section without invented claims.

Lesson 04 — Images with Google Flow

Create three illustrative 16:9 images and save exact filenames.

Lesson 05 — Generate HTML Code

Build a single-file landing page with ChatGPT and verify its WhatsApp CTA.

Lesson 06 — Mobile Check and Changes

Fix broken images, inspect mobile layout and request controlled revisions.

Lesson 07 — Publish on Netlify

Deploy the complete folder and verify the live page.

Lesson 08 — Build a Portfolio

Create a truthful portfolio for presenting real and demonstration projects.

Lesson 09 — Find Clients

Research suitable local businesses and send personalized outreach.

Lesson 10 — Handle Client Objections

Explain the value of a WhatsApp landing page and negotiate professionally.

Lesson 11 — Course Recap

Complete the workflow and prepare a client-ready demonstration.
