Lesson 01 — Course Introduction

Learning objective

Define a landing page, its single conversion goal and the full no-code course journey.

Concepts and explanations

• A landing page is a focused page built around one action, here a WhatsApp enquiry or order.

• Local businesses may use it alongside social media to organize offers, examples and contact information.

• Sweet Crumbs is a sample home bakery in Indore.

Step-by-step lesson workflow

• Identify three nearby business types that could use a landing page.

• Explain their likely page goal.

• List ChatGPT, Google Flow, VS Code, Chrome, Netlify, Maps and Sheets as the course tools.

How to check your work

Compare the result against the original business brief and confirm that no new product claims, pricing, contact details, testimonials or guarantees were introduced.

For the Sweet Crumbs demonstration, verify the specific file names, page goal and section structure before moving to the next lesson.

If an AI response is incomplete, request the missing portion and recheck the combined result instead of assuming it is ready to publish.

Practical assignment

Write down three business categories and one realistic goal for each.

Common mistake and integrity rule

Do not guarantee orders or earnings.

Review checklist

☐ I understand the key concepts. ☐ I completed the activity. ☐ I verified names, facts, files and links.

Based on the supplied Course Notes, Chatbot Knowledge Base and All Prompts. English explanatory notes, not a video transcript.
