Lesson 04 — Images with Google Flow

Learning objective

Create three illustrative 16:9 images and save exact filenames.

Concepts and explanations

• The course uses a birthday cake hero image, a four-cake flat-lay and hands decorating a cake in a home kitchen.

• Prompts request realistic food photography without text, faces or logos.

Step-by-step lesson workflow

• Use ChatGPT to draft the three Google Flow / Nano Banana Pro prompts.

• Generate the images and review visual accuracy.

• Save as hero.jpg, cakes.jpg and kitchen.jpg inside sweet-crumbs.

How to check your work

Compare the result against the original business brief and confirm that no new product claims, pricing, contact details, testimonials or guarantees were introduced.

For the Sweet Crumbs demonstration, verify the specific file names, page goal and section structure before moving to the next lesson.

If an AI response is incomplete, request the missing portion and recheck the combined result instead of assuming it is ready to publish.

Practical assignment

Prepare the three correctly named images.

Common mistake and integrity rule

AI demonstration images must not be passed off as genuine client-product photos.

Review checklist

☐ I understand the key concepts. ☐ I completed the activity. ☐ I verified names, facts, files and links.

Based on the supplied Course Notes, Chatbot Knowledge Base and All Prompts. English explanatory notes, not a video transcript.
