Lesson 07 — Publish on Netlify

Learning objective

Deploy the complete folder and verify the live page.

Concepts and explanations

• Netlify Drop accepts a folder containing index.html and assets.

• A published netlify.app link can be renamed when available.

• Updates require redeploying the revised folder.

Step-by-step lesson workflow

• Upload the entire sweet-crumbs folder, not only index.html.

• Open the published URL, test images and WhatsApp links, then save the URL.

• For edits, upload the revised full folder.

How to check your work

Compare the result against the original business brief and confirm that no new product claims, pricing, contact details, testimonials or guarantees were introduced.

For the Sweet Crumbs demonstration, verify the specific file names, page goal and section structure before moving to the next lesson.

If an AI response is incomplete, request the missing portion and recheck the combined result instead of assuming it is ready to publish.

Practical assignment

Publish and test a live demonstration page.

Common mistake and integrity rule

Netlify interfaces and plan limits can change; confirm current options.

Review checklist

☐ I understand the key concepts. ☐ I completed the activity. ☐ I verified names, facts, files and links.

Based on the supplied Course Notes, Chatbot Knowledge Base and All Prompts. English explanatory notes, not a video transcript.
