Lesson 08 — Build a Portfolio

Learning objective

Create a truthful portfolio for presenting real and demonstration projects.

Concepts and explanations

• The sample QuickPage Studio portfolio uses a dark theme, white text and lime accent.

• Sections include hero, services, Sweet Crumbs sample card, future-client placeholder, process, packages and contact.

• Its image is sweet-crumbs.png.

Step-by-step lesson workflow

• Generate a one-file portfolio page.

• Put index.html and sweet-crumbs.png in my-portfolio.

• Add only genuine work or clearly labeled demos.

• Publish the folder and verify the sample link.

How to check your work

Compare the result against the original business brief and confirm that no new product claims, pricing, contact details, testimonials or guarantees were introduced.

For the Sweet Crumbs demonstration, verify the specific file names, page goal and section structure before moving to the next lesson.

If an AI response is incomplete, request the missing portion and recheck the combined result instead of assuming it is ready to publish.

Practical assignment

Publish a portfolio and save its URL.

Common mistake and integrity rule

Never invent clients, reviews or performance results.

Review checklist

☐ I understand the key concepts. ☐ I completed the activity. ☐ I verified names, facts, files and links.

Based on the supplied Course Notes, Chatbot Knowledge Base and All Prompts. English explanatory notes, not a video transcript.
