Lesson 09 — Find Clients

Learning objective

Research suitable local businesses and send personalized outreach.

Concepts and explanations

• The course suggests home bakers, salons, tiffin providers, coaching, car wash and event decorators.

• Google Maps helps identify prospects; a Google Sheet tracks business type, area, website status, map link and outreach status.

Step-by-step lesson workflow

• Find and verify ten businesses.

• Create a spreadsheet.

• Draft a short personalized first WhatsApp message with a real portfolio link and a single polite follow-up after two days.

How to check your work

Compare the result against the original business brief and confirm that no new product claims, pricing, contact details, testimonials or guarantees were introduced.

For the Sweet Crumbs demonstration, verify the specific file names, page goal and section structure before moving to the next lesson.

If an AI response is incomplete, request the missing portion and recheck the combined result instead of assuming it is ready to publish.

Practical assignment

Build a verified prospect list and two messages.

Common mistake and integrity rule

Do not bulk-spam or invent praise and business facts.

Review checklist

☐ I understand the key concepts. ☐ I completed the activity. ☐ I verified names, facts, files and links.

Based on the supplied Course Notes, Chatbot Knowledge Base and All Prompts. English explanatory notes, not a video transcript.
