

Skillomate Fix Comparison Report

Generated: September 12, 2026, Asia/Kolkata. Scope: fixes after the test-only report; no store submission or external deployment performed.

Summary

Previously failing local tests and dependency setup issues were corrected where they were inside the repository. Core backend suites, frontend production build, player tests, Expo config, Android export, AI frontend build/lint, AI backend syntax check, and copied backend smoke/index checks now pass. Remaining items are outside safe code changes: HTTPS is not available on the raw IP, k6 is not installed, and the mobile Expo audit advisory requires a breaking force change.

Before vs After

Area	Previous Result	After Fix
Backend AI tests	13 passed, 2 failed: conversationList undefined.	15/15 passed. Failed AI turns no longer pollute saved chat context.
Integration config check	Failed by requiring MSG91/Razorpay secrets even in demo/simulated mode.	Passed. Check now follows selected OTP/payment mode.
Mongo index audit	Failed when a collection namespace did not exist.	Passed. Missing collections are handled safely; missing indexes: 0.
Backend audit	1 moderate qs advisory.	0 vulnerabilities after non-breaking audit fix.
AI frontend	Build/lint failed: vite/eslint not installed.	Build and lint passed after dependency install/audit fix.
AI backend	Test script was placeholder failure.	Test now runs node --check server.js and passes. Merge markers removed.
Copied backend	Smoke failed due missing deps/env; index audit failed missing mongoose/local DB.	Dependencies installed; local smoke passes; index audit passes using fallback env when no local env exists.
Mobile Android bundle	Export passed before.	Export still passes after fixes.
Mobile audit	Moderate Expo tooling uuid advisory.	Still present; npm only offers force fix with breaking Expo package change.
HTTPS raw IP	https://13.203.94.35 failed.	Still fails; needs server/domain/TLS infrastructure.
k6 load tests	k6 missing.	Still not run; requires system k6 installation.

Notable Changes

- edunex-f/js/nex-ai-widget.js: added defensive conversation-list lookup, fail-soft localStorage writes, and removal of failed AI sends from saved conversation context.
- edunex-b/scripts/check-integrations.cjs: made provider checks conditional on OTP_PROVIDER and PAYMENT_GATEWAY_MODE so demo/simulated modes do not require live provider secrets.
- edunex-b/scripts/audit-mongo-indexes.mjs and appcopyai/backend copy: handle Mongo NamespaceNotFound as an empty collection instead of a hard failure.
- appcopyai/Ai/backend/server.js: removed merge-conflict markers and kept the fuller Skillomate AI Influencer tutor prompt.
- appcopyai/Ai/backend/package.json: replaced placeholder failing test with node --check server.js.
- Refreshed lockfiles/dependencies with npm install/audit fix where needed.

Verification Results After Fix

Check	Result	Time
edunex-b npm run test:ai	15/15 passed	0.18s
edunex-b npm run test:integrations	21/21 passed	0.20s
edunex-b npm run test:maintenance	9/9 passed	0.19s
edunex-b npm run test:certification	12/12 passed	0.34s
edunex-b npm run test:video	15/15 passed	0.33s
edunex-b npm run smoke:api -- --start	Passed with MongoDB connected; 0 courses, 6 categories at run time	1.24s
edunex-b npm run db:index:audit	Passed; 27 models, missing indexes: 0	1.94s
edunex-b npm audit --omit=dev	0 vulnerabilities	0.46s
edunex-f npm run build	Production build passed; large HLS chunk warning remains	2.20s
edunex-f npm run test:player	22/22 passed	1.76s
edunex-f npm audit --omit=dev	0 vulnerabilities	0.50s
appcopyai npx expo config --type public	Passed	1.87s
appcopyai npx expo export --platform android	Passed	3.01s
appcopyai npm audit --omit=dev	11 moderate Expo tooling advisories remain; breaking force fix not applied	0.67s
appcopyai/Ai/frontend npm run build	Passed	0.31s
appcopyai/Ai/frontend npm run lint	Passed	0.85s
appcopyai/Ai/frontend npm audit --omit=dev	0 vulnerabilities	0.52s
appcopyai/Ai/backend npm run test	Passed syntax check	0.11s
appcopyai/Ai/backend npm audit --omit=dev	0 vulnerabilities	0.45s
appcopyai/backend npm run smoke:api:local	Passed local smoke; DB-backed endpoints skipped in allow-db-unavailable mode	0.46s
appcopyai/backend npm run db:index:audit	Passed; 20 models, missing indexes: 0	1.85s
appcopyai/backend npm audit --omit=dev	0 vulnerabilities	0.44s
http://13.203.94.35/api/health	Passed	0.05s
https://13.203.94.35/api/health	Failed: port 443 not reachable	0.02s
k6 version	Failed: k6 not installed	0.00s

Residual Risk

- For 14-day internal testing, the app is in much better shape after the fixes. For public production, configure HTTPS on a domain and update mobile production API URLs away from plain HTTP raw IP.
- Do not run npm audit fix --force on the mobile app without planning an Expo compatibility pass, because npm proposes a breaking package change.
- Install k6 separately before running load-test scripts.
- The emulator was not attached during this fix pass, so live device state was not revalidated.
