

Phase 6 cleanup

Horizontal-only course thumbnail persistence

A narrow regression fix for clearing obsolete vertical course-thumbnail values while preserving the production CloudFront horizontal thumbnail.

1 line	12 / 12	4 / 4	20 / 20
Runtime behavior change	Focused backend	Admin UI	Relevant backend

Before vs after

Admin payload	When the blank vertical field represented a legacy <code>/uploads/...</code> value, the UI deleted <code>thumbnailVerticalUrl</code> from the PATCH payload.	The UI submits <code>thumbnailVerticalUrl: ""</code> explicitly.
MongoDB result	Omitted field meant the old local value remained unchanged.	Existing backend normalization persists the explicit blank as <code>null</code> .
Horizontal URL	Valid CloudFront value was already preserved.	Unchanged; verified in both submitted payload and saved response.
API compatibility	Vertical values could be legacy, shared, or absent.	Null/empty remains supported; API helpers safely fall back to the horizontal course thumbnail.

Scope controls

- No backend storage, S3 client, CloudFront URL, or horizontal thumbnail logic changed.
- No lesson thumbnail behavior changed.
- Vertical course-thumbnail fields remain optional for compatibility; no vertical thumbnail is required.
- No deployment or production data mutation was performed.

Verification evidence

Backend thumbnail storage	12 / 12 PASS	Includes explicit blank-to-null persistence, horizontal preservation, and no-vertical API behavior alongside S3-only controls.
Admin edit form	4 / 4 PASS	Confirms the legacy local vertical value appears blank, is submitted as blank, and leaves the shared horizontal URL unchanged.
Relevant backend group	20 / 20 PASS	Admin course summaries, course playlist/API behavior, and thumbnail storage tests.
Diff hygiene	PASS	git diff --check completed without whitespace errors.

Files changed in this cleanup

- `edunex-f/src/pages/admin/AdminUploadPage.jsx` - stops removing the explicit blank vertical course field from the PATCH payload.
- `edunex-f/tests/player/AdminEdit.test.jsx` - verifies Admin submits blank vertical and preserves horizontal.
- `edunex-b/tests/thumbnail-cdn.test.cjs` - verifies database clearing and API compatibility with no vertical thumbnail.

Release decision

READY TO DEPLOY	YES
Expected production effect	The next Admin save with the vertical course-thumbnail field blank clears the obsolete MongoDB value. The horizontal CloudFront URL remains unchanged.
Deployment action	Not performed. Deploy through the existing Git/PM2 process when approved.
