

Expanded Learner Panel Color Fix

Before/after implementation report - 17 September 2026

Previous behavior	New behavior
The expanded learner-management panel was forced to #fbfdfb by a legacy selector. In dark mode this produced a bright white area, washed-out text, and low-contrast detail cards.	The expanded panel now uses the active admin theme variables. Dark mode renders the dark surface with white/muted text; the explicit light-theme selector continues to render a white surface.

Code change

Updated `edunex-f/src/pages/admin/admin-react.css`. The dark and light progress-panel rules now include the more-specific `.users-shell .progress-panel` selector, which overrides the legacy rule without relying on source-order ambiguity.

Verification

Check	Result	Evidence
CSS cascade	PASS	The corrective selector matches/exceeds the legacy selector specificity.
Dark theme	PASS	Uses <code>var(--admin-surface)</code> , <code>var(--admin-text)</code> , and <code>var(--admin-line)</code> .
Light theme	PASS	Explicit <code>admin-theme-light</code> override remains white with dark text.
Production build	PASS	Vite transformed 114 modules and completed successfully.

Remaining validation

Refresh the authenticated `/admin/users` tab and expand a learner. The logged-in browser state was not available to headless validation, so a final visual confirmation in the existing authenticated Chrome tab is recommended.
