

Manual Testing Defect Report

Web and mobile observations recorded during a guided manual QA session

TEST TARGET	https://skillomate.in/
TEST DATE	17 September 2026
PRIMARY BROWSER	Google Chrome / Chromium
PLATFORMS	Desktop web and mobile application/view
SCOPE	Authentication, onboarding, homepage, courses, dashboard, profile, responsiveness, and interaction behavior

14 open concerns were recorded: 1 Critical, 5 High, and 8 Medium severity. Authentication state, profile loading, course routing, validation, and dynamic dashboard data should be addressed first.

Executive summary

Severity	Count	Recommended response
Critical	1	Fix before release; profile/session data may be unreliable.
High	5	Prioritize in the next stabilization cycle.
Medium	8	Schedule with usability, accessibility, and loading-state fixes.

Highest-risk observations

The profile flow briefly passes through a login/loading route and then displays missing account/subscription data. Wrong-password handling leaks a JavaScript error. Enrolled users are sent to course sales/details content, and dashboard progress widgets do not appear to use real user data.

Test limitations

This report consolidates observed manual behavior and supplied screenshots. Destructive account actions and payment completion were not performed. Items should be reproduced in a controlled QA environment and verified against network/API responses before closure.

Defect register

ID	Area / issue	Severity	Priority	Status
1	Login Authenticated/course content appears on the login screen	High	High	Open
2	Login Wrong password exposes a technical accessToken error	High	High	Open
3	Homepage No accessible theme switch on the main screen	Medium	Medium	Open
4	Homepage Course poster carousel stops after click-and-swipe	Medium	Medium	Open
5	Mobile login Phone input accepts an unlimited number of digits	High	High	Open
6	Authentication Authenticated user can open the login form	Medium	High	Open
7	Dashboard/course Open Course sends an enrolled user to a sales/details page	High	High	Open
8	Course details Raw Markdown syntax is visible	Medium	Medium	Open
9	Profile Profile navigation flashes a login/loading route and loses account state	Critical	High	Open
10	Session management Concurrent login silently logs out the first session	High	High	Open
11	Dashboard Daily Activity and Learning Status are not dynamic	High	High	Open
12	Signup Enter key does not submit the phone registration form	Medium	Medium	Open
13	Profile setup Desktop age selector does not support hold-and-drag	Medium	Medium	Open
14	Courses Unavailable filters and promotional content flash during loading	Medium	High	Open

Detailed findings

#01 Login

High | Priority High | Open

Authenticated/course content appears on the login screen

Steps: Open the login screen while signed out.

Actual: Course details, tabs, and Continue Learning information are visible where authentication content should appear.

Expected: Show only authentication content until login succeeds; protect course and progress data.

#02 Login

High | Priority High | Open

Wrong password exposes a technical accessToken error

Steps: Enter a valid mobile number with an incorrect password and select Sign In.

Actual: The page displays: Cannot read properties of null (reading 'accessToken').

Expected: Display a safe message such as 'Incorrect mobile number or password' and handle null responses.

#03 Homepage

Medium | Priority Medium | Open

No accessible theme switch on the main screen

Steps: Open the main screen and inspect the header and primary controls.

Actual: The site is dark, but there is no visible light/dark/system control on the main screen.

Expected: Provide a discoverable theme control in the header or profile menu and persist the preference.

#04 Homepage

Medium | Priority Medium | Open

Course poster carousel stops after click-and-swipe

Steps: Drag/swipe the moving course posters, then release.

Actual: Automatic movement stops and does not resume.

Expected: Resume autoplay after a short delay, or provide an accessible Pause/Play control.

Detailed findings (continued)

#05 Mobile login

High | Priority High | Open

Phone input accepts an unlimited number of digits

Steps: On mobile, enter more digits than a valid phone number in Email or Phone.

Actual: The field accepts an excessively long value without validation.

Expected: Enforce the supported phone length (10 digits after +91 for India) and show clear validation.

#06 Authentication

Medium | Priority High | Open

Authenticated user can open the login form

Steps: While logged in, select a Login link or navigate to /login.

Actual: The login form renders while the header simultaneously shows the user as logged in and offers Log out.

Expected: Hide Login links for authenticated users and redirect /login to Dashboard or Home.

#07 Dashboard/course

High | Priority High | Open

Open Course sends an enrolled user to a sales/details page

Steps: With active course access, select Open Course from the dashboard.

Actual: The public course detail page opens and shows the Rs.1 first-month offer, despite active access.

Expected: Open the course workspace, lesson list, or last-viewed lesson directly.

#08 Course details

Medium | Priority Medium | Open

Raw Markdown syntax is visible

Steps: Open the AI Influencer Course details page and inspect the description.

Actual: Markdown markers such as ## and ** appear as literal text.

Expected: Render supported Markdown or store and display clean rich text.

Detailed findings (continued)

#09 Profile

Critical | Priority High | Open

Profile navigation flashes a login/loading route and loses account state

Steps: While logged in, select the profile icon.

Actual: A bright loading screen and login.html?next=profile.html flash; the profile then shows Login, no email, no subscription, and no mobile.

Expected: Verify authentication before rendering, preserve theme/session state, and load the correct account data.

#10 Session management

High | Priority High | Open

Concurrent login silently logs out the first session

Steps: Sign in on one device, then sign in elsewhere with the same account.

Actual: The first session is terminated without an explanation.

Expected: Explain the concurrent-session policy, warn before replacement where appropriate, and show a signed-out reason.

#11 Dashboard

High | Priority High | Open

Daily Activity and Learning Status are not dynamic

Steps: Use the account, complete activity, and revisit the dashboard widgets.

Actual: The chart appears fixed; Hours Spent shows 'Synced', Completed shows 'Real courses', and status remains 'Live'.

Expected: Calculate user-specific chart values, duration, completion counts, progress, and a proper empty state.

Detailed findings (continued)

#12 Signup

Medium | Priority Medium | Open

Enter key does not submit the phone registration form

Steps: Enter a valid phone number on /signup and press Enter/Return.

Actual: Nothing happens and no validation feedback appears.

Expected: Submit like Send OTP & Continue; if consent is missing, focus the checkbox and show validation.

#13 Profile setup

Medium | Priority Medium | Open

Desktop age selector does not support hold-and-drag

Steps: On desktop, press and drag inside the age selector.

Actual: The age does not scroll or change. Mobile touch dragging passes.

Expected: Support mouse drag, wheel, trackpad, and Arrow Up/Down on desktop while retaining mobile behavior.

#14 Courses

Medium | Priority High | Open

Unavailable filters and promotional content flash during loading

Steps: Open or reload /courses and observe the loading state.

Actual: Extra categories and promotional content appear briefly, then disappear when backend data loads.

Expected: Use an empty/skeleton loading state and render filters only after the catalogue response succeeds.

Screenshot evidence

Representative Chromium captures from the testing session. Screenshots supplied only inside the chat could not be recovered as source files, so authenticated-only defects remain documented in the detailed findings.

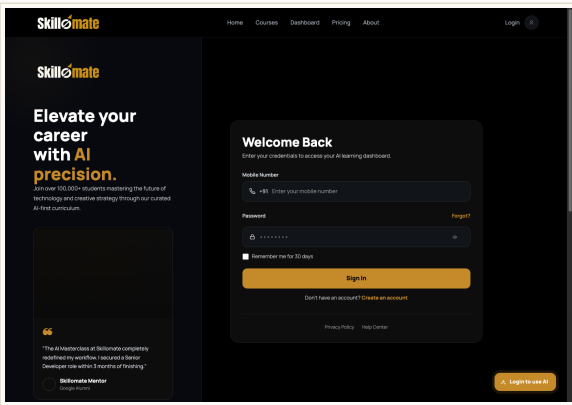

Figure 3. Desktop login screen baseline.

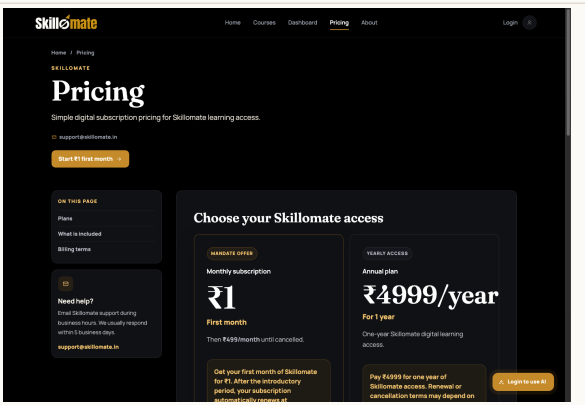

Figure 4. Pricing page baseline.

Recommended fix order

1	Authentication integrity Fix profile/session state (#9), wrong-password handling (#2), authenticated login routing (#6), and concurrent-session messaging (#10).
2	Core learning journey Route enrolled learners directly into course content (#7) and remove protected data from login contexts (#1).
3	Data accuracy Replace dashboard placeholders with user-specific backend values (#11) and render course descriptions correctly (#8).
4	Validation and input Constrain mobile phone input (#5), support Enter on signup (#12), and repair desktop age interaction (#13).
5	UI stability Remove loading-state flashes (#14), restore carousel behavior (#4), and improve theme access (#3).

Closure criteria

For each item: reproduce on the reported platform, implement the correction, add or update automated coverage where practical, retest the original steps, run a regression pass on related flows, and attach fresh evidence before marking the defect closed.
