

Marketing OTP API Host Fix Comparison

Date: 2026-10-05

Summary

The marketing paywall was posting OTP requests to `https://skillomate.in/api/auth/send-mobile-otp` because the static Next build did not have `NEXT_PUBLIC_API_BASE_URL` configured. That path returned a 504 Gateway Timeout in Chrome. This build defaults production marketing API calls to `https://api.skillomate.in` while preserving relative `/api` calls for localhost.

Before vs New Build

Area	Previous behavior	New behavior
OTP request host	Marketing page posted to <code>skillomate.in/api/auth/send-mobile-otp</code>	Marketing page posts to <code>https://api.skillomate.in/api/auth/send-mobile-otp</code>
Local development	Relative <code>/api</code> calls worked with the Vite proxy.	Relative <code>/api</code> calls are still used on localhost.
Configuration	Required a build-time <code>NEXT_PUBLIC_API_BASE_URL</code> to avoid the Vite proxy.	Uses a configured <code>NEXT_PUBLIC_API_BASE_URL</code> when present
Observed error	Chrome showed 504 Gateway Timeout and the UI displayed "Request failed: Please try again."	The generated marketing page contains the API subdomain fallback

Verification Performed

- `npm run build` completed successfully.
- Generated marketing page chunk contains `https://api.skillomate.in` fallback.
- CORS preflight to `https://api.skillomate.in/api/auth/send-mobile-otp` from Origin `https://skillomate.in` returned 204.
- No live OTP SMS was sent during verification.
