

SKILLOMATE CHANGE REPORT

Certificate HTML/CSS template

Previous vs new implementation - 19 September 2026

OUTCOME

The existing public certificate verification route now renders a branded, print-ready Skillomate certificate based on the supplied white-and-gold reference.

PREVIOUS VERSION

The route returned a minimal inline page with a single border, generic typography, basic completion text and one print button.

NEW VERSION

- Reusable HTML and CSS template files.
- Dynamic learner name, course title, issue date, lesson count and certificate ID.
- Skillomate logo, layered gold frame, decorative curves, completion seal and signature treatment.
- Verified and revoked visual states.
- A4 landscape print rules and Print / Save as PDF action.
- HTML escaping for learner-controlled values.

INTEGRATION

The existing `/api/certificates/verify/:id` route uses the template directly. Existing certificate issuance, verification URLs, learner downloads and admin links continue to work.

FILES

edunex-b/templates/certificate.html
edunex-b/templates/certificate.css
edunex-b/services/certificateTemplate.js
edunex-b/routes/certification.js
edunex-b/tests/certification.test.cjs

VERIFICATION

Certification suite: 18/18 tests passed.
Desktop landscape render checked at 1400 x 1050.
Dynamic values, escaping, verified state and revoked state are covered by tests.
