

Marketing Static URL Corrected Page Comparison

Date: 2026-10-05

Summary

The previous build mapped /static-pages/skillomate-ai-influencer-courseweb/#paywall to the older offer page, which is why the local browser opened the Skillomate Premium Access checkout instead of the marketing page. This build corrects that mapping so the new static URL serves the marketing page export and keeps /marketing-web only as a compatibility redirect.

Before vs New Build

Area	Previous behavior	New behavior
Static URL	/static-pages/skillomate-ai-influencer-courseweb/#paywall	The resolved URL now serves the marketing page static export from the new static path.
Legacy marketing URL	/marketing-web compatibility could be caught by the React dev/preview middleware	React dev/preview redirects to the offering route locally, marketing-web.html
Checkout anchors	Marketing checkout links were tied to the old /marketing-web	Marketing assets, canonical metadata, return URL, and paywall link
Old offer URL	The static influencer-course offer route was temporarily stopped	static-pages/skillomate-ai-influencer-course/#paywall is restored
Build reliability	Next font loading could require Google Fonts network access during builds	Assets and styles use local/system font CSS variables, avoiding

Notable Code Changes

- Marketing Next base path defaults to /static-pages/skillomate-ai-influencer-courseweb.
- Vite dev/preview middleware now serves marketing-web/out at the new static path and redirects old /marketing-web requests there.
- The React SPA no longer treats /marketing-web as a legacy offer redirect or eager HomePage route.
- Deployment and S3 smoke tests now upload /marketing-web compatibility objects from the new static marketing export.
- Generated dist output contains the marketing page and no longer contains the old Skillomate Premium Access offer text at that URL.

Verification Performed

- npm run build completed successfully.
- Route assertions confirmed marketing-web.html and /marketing-web resolve to /static-pages/skillomate-ai-influencer-courseweb/#paywall.
- deployment/test-frontend-s3-deploy.sh passed.
- Generated HTML checks confirmed no /marketing-web asset leakage and no old offer-page title text in the marketing static index.

Notes

The marketing page is still produced by the existing marketing-web Next project, but it is now exported and served under the requested static URL. This keeps the current marketing implementation intact while matching the requested public path and local development behavior.
