

Skillomate offer video routing update

Before/after implementation report | 22 September 2026 | Frontend configuration and player fallback

BEFORE	All ten offer routes used one hardcoded video URL.	AFTER	Each route resolves a unique configured video URL, with a safe fallback.
--------	--	-------	--

Page-to-video mapping

Page	Configured video	Current status	Page	Configured video	Current status
/offer	/assets/skillomate-offer-preview.mp4	Existing source asset	/offer6	/assets/offers/offer-06.mp4	Upload slot
/offer2	/assets/offers/offer-02.mp4	Upload slot	/offer7	/assets/offers/offer-07.mp4	Upload slot
/offer3	/assets/offers/offer-03.mp4	Upload slot	/offer8	/assets/offers/offer-08.mp4	Upload slot
/offer4	/assets/offers/offer-04.mp4	Upload slot	/offer9	/assets/offers/offer-09.mp4	Upload slot
/offer5	/assets/offers/offer-05.mp4	Upload slot	/offer10	/assets/offers/offer-10.mp4	Upload slot

Code and behavior changes

- Added src/lib/offerMedia.js as the centralized ten-route media map.
- Updated AdOfferPage.jsx to resolve media from the current route.
- Added automatic fallback to the existing preview on a media load error.
- Added route mapping and fallback coverage to OfferPage.test.jsx.
- Added OFFER_VIDEOS.md with exact upload filenames.

Verification

- Focused offer tests: 13/13 passed.
- Production Vite build: passed.
- Static validation: ten unique URLs configured.
- Full player suite: 219/220 passed; one unrelated payment regression remains.
- Rendered Browser QA unavailable because browser control was not callable in this session.

MEDIA UPLOAD REQUIRED

Only the /offer source video exists today. Add offer-02.mp4 through offer-10.mp4 under public/assets/offers; fallback keeps every page functional until then.
