

Skillomate 1.0 Build 12 Comparison Report

Generated 2026-09-14 16:20 for the new iOS build and version configuration update.

Area	Previous	New / Current
iOS artifact	Skillomate-1.0-build11-development-export/Skillomate.ipa	Skillomate-1.0-build12-development-export/Skillomate.ipa
iOS app version	1.0	1.0
iOS build number	11	12
iOS archive	Skillomate-1.0-build11.xcarchive	Skillomate-1.0-build12.xcarchive
Android APK artifact	Skillomate-1.0-vc2-production.apk	Last existing APK remains versionName 1.0 / versionCode 2
Android AAB artifact	Skillomate-1.0-vc2-production.aab	Last existing AAB embedded config shows version 1.0 / versionCode 2
Android config	versionCode 2 / versionName 1.0	versionCode 12 / versionName 1.0
App icon	Existing source icon used by iOS; Android had generated launcher assets	Android launcher density assets regenerated from assets/icon.png and adaptive-icon.png; iOS AppIcon already matched assets/icon.png

Code and Configuration Changes

appcopyai/app.json: Android versionCode was updated from 2 to 12 while keeping version 1.0. The iOS buildNumber was already set to 12.

appcopyai/android/app/build.gradle: defaultConfig versionCode was updated from 2 to 12 and versionName remains 1.0.

appcopyai/ios/ProtectedVideo/Info.plist: CFBundleVersion was corrected from 11 to 12 and CFBundleShortVersionString remains 1.0.

appcopyai/ios/Podfile.lock: CocoaPods metadata was refreshed by pod install using CocoaPods 1.17.0 so the Pods sandbox matched the lockfile.

Build and Verification

Built iOS archive with xcodebuild through ios/ProtectedVideo.xcworkspace after running pod install.

Exported development-signed IPA to appcopyai/releases/ios/Skillomate-1.0-build12-development-export/Skillomate.ipa.

Verified archive Info.plist reports CFBundleShortVersionString 1.0 and CFBundleVersion 12.

Verified DistributionSummary.plist reports Skillomate.ipa versionNumber 1.0, buildNumber 12, arm64 architecture, and Apple Development signing.

Verified the latest existing APK with aapt: package com.skillomate.app, versionName 1.0, versionCode 2.

Verified the latest existing AAB filename and embedded Expo app.config: version 1.0, versionCode 2. A bundletool/apkanalyzer binary was not available locally for direct binary manifest inspection.

Notes

No new Android APK or AAB was generated in this build pass; only the native Android version configuration was advanced to versionCode 12 for the next Android build.

The icon source used for this sync was appcopyai/assets/icon.png and appcopyai/assets/adaptive-icon.png. No separate newly uploaded icon file was present in the workspace during this run.

The iOS export is development-signed. For App Store Connect or TestFlight upload, use the testflight export/build path with App Store signing.
