

Skillomate Android vc3 Build Comparison

Generated 2026-09-14 16:29 after creating Android version 1.0 / versionCode 3 artifacts.

Area	Previous	New
Android APK	Skillomate-1.0-vc2-production.apk	Skillomate-1.0-vc3-production.apk
Android AAB	Skillomate-1.0-vc2-production.aab	Skillomate-1.0-vc3-production.aab
Android version	1.0 / versionCode 2	1.0 / versionCode 3
Build tasks	Previous release artifacts from Sep 12	./gradlew :app:assembleRelease and ./gradlew :app:bundleRelease
Signing	Previous APK/AAB signed with an older local certificate not present as a keystore	APK and AAB signed with android/app/debug.keystore because no Play upload keystore was available
iOS / Xcode	iOS 1.0 build 12 archive/export already present	Opened ios/ProtectedVideo.xcworkspace in Xcode for manual archive/TestFlight upload

Code Changes

appcopyai/app.json Android versionCode changed from 2 to 3. Version remains 1.0.

appcopyai/android/app/build.gradle defaultConfig versionCode changed from 2 to 3. versionName remains 1.0.

No app feature code changes were made for this build request.

Verification

APK badging was verified with aapt: package com.skillomate.app, versionName 1.0, versionCode 3, minSdk 24, targetSdk 36.

APK signature was verified with apksigner after zipalign/signing.

AAB embedded Expo app.config was inspected and shows android.versionCode 3 and version 1.0.

AAB signature was verified with jarsigner after signing with the available project debug keystore.

Operational Notes

Xcode was opened to ios/ProtectedVideo.xcworkspace so the app can be archived and uploaded to TestFlight manually.

For a real Play Console production upload, replace the debug-style signing with the proper Play upload keystore if available.

A small disk-space cleanup removed only duplicate Android intermediate APK files generated during this run after the final release APK had been copied.
