

IOS APP STORE READINESS

Skillomate iOS optimization build comparison

Baseline revision **af1e99c** compared with the optimized working-tree candidate built and installed on an iPhone 17 Simulator using Xcode 26.6.

BASELINE	OPTIMIZED CANDIDATE	RESULT
Build 12 HTTP production endpoint Web checkout exposed on iOS	Build 12 local candidate HTTPS production endpoint Existing-member access only on iOS	Native build passed 0 errors 1 duplicate-library warning

Outcome

The candidate materially improves review readiness: iOS purchase steering was removed, App Transport Security was tightened, privacy declarations were populated, account-deletion messaging now matches backend behavior, and the primary sign-in experience was rebuilt around safe areas, native autofill, Dynamic Type, and minimum iOS touch targets.

AREA	PREVIOUS	NEW	DELTA
Transport security	HTTP IP exception	HTTPS only in production	Improved
Digital purchase policy	External checkout CTA	Existing-member help only	Risk reduced
Privacy manifest	Collected data empty	9 linked, non-tracking categories	Aligned
Primary auth UI	Large card-like hero	Native safe-area layout	Improved
Verification	Runtime only	Bundle + native build + UI tests	Expanded

01 VISUAL COMPARISON

Login screen: before and after

The new screen follows the generated design direction while retaining the existing Skillomate logo, near-black palette, ivory text, and gold action color.

PREVIOUS	OPTIMIZED
 The previous login screen features a dark background with a centered Skillomate logo and tagline. Below is a 'Welcome Back' message. The form consists of two separate input fields for 'EMAIL OR PHONE' and 'PASSWORD', with a 'FORGOT?' link. A prominent gold 'Log In' button is centered. Below the button is an 'OR' divider, followed by a 'Create an Account' link. At the bottom is a 'SKILLOMATE SECURE' security claim.	 The optimized login screen maintains the dark background and logo. The 'Welcome back' message is followed by a sub-header 'Continue your AI learning journey.' The form uses native-style rounded input fields for 'EMAIL OR PHONE' and 'PASSWORD', with a 'Forgot password?' link. The 'Log in' button is now a disabled, lighter gold color. Below it is a 'Create account' link. At the bottom, there is a footer with 'Terms Privacy Support' links.
Rounded hero container, separated form, OR divider, and generic security claim.	Continuous safe-area layout, clearer hierarchy, native autofill inputs, disabled-state CTA, and legal/support footer.

Concept fidelity

- Matched the centered logo and tagline, left-aligned welcome block, bordered fields, gold primary action, account-creation row, and Terms / Privacy / Support footer.
- Kept the implementation flat and native: no gradient, no decorative card shell, and no new UI dependency.
- Intentional deviation: the empty Log in button is visibly disabled to prevent invalid requests and expose state clearly.

02 APPLE POLICY DELTA

Review-sensitive behavior changed

TOPIC	PREVIOUS BUILD	OPTIMIZED CANDIDATE
Digital content purchase	iOS users could open the Skillomate web payment page and saw INR trial pricing.	iOS shows existing-membership guidance, refresh, and support only. Android keeps its checkout flow.
Account deletion	UI told active-plan users to cancel before deletion.	UI accurately states that Skillomate attempts billing cancellation and pauses deletion only if confirmation fails.
Privacy manifest	Required-reason APIs were present, but collected-data declarations were empty.	Name, email, phone, user ID, purchase history, product interaction, user content, support, and other profile data are declared as linked and non-tracking.
Network security	Production used an HTTP IP address with an ATS exception.	Production uses https://api.skillomate.in; the insecure IP exception was removed from source and packaged Info.plist.
Permissions	Generic photo-library copy.	Purpose string now states access occurs only when the user chooses a profile photo.
Platform presentation	Automatic appearance and all orientations in app config/native plist.	Dark appearance and portrait-only iPhone presentation match the actual app experience.

Important submission boundary

This candidate is prepared for account-based access on iOS, not for selling digital courses inside the app. Add StoreKit/In-App Purchase before exposing an iOS purchase CTA, unless Apple grants and the app correctly implements an applicable storefront entitlement.

03 CODE AND CONFIGURATION

What changed in the repository

FILE	NOTABLE CHANGE
appcopyai/App.js	Redesigned login; native autofill semantics; focus styles; larger controls; legal footer; iOS membership gating; account-deletion copy; HTTPS production default.
appcopyai/app.json	Aligned URL scheme, dark mode, portrait orientation, purpose copy, and ATS settings.
appcopyai/eas.json	Changed all API and AI build-profile endpoints from the HTTP IP to https://api.skillomate.in.
Info.plist	Removed insecure domain exception; enforced portrait and dark appearance; refined the photo-library purpose string.
PrivacyInfo.xcprivacy	Added production data-collection disclosures while retaining required-reason API declarations and tracking=false.
Podfile.lock	Synchronized installed Expo 57 patch versions so the CocoaPods sandbox and native build agree.
docs/IOS_APP_STORE_SUBMISSION.md	Added portal-only privacy, review-account, metadata, purchase-policy, and final-preflight steps.

UI system used

- Colors: near-black #0D0D0B, charcoal surfaces #171714, ivory #F5F1E8, gold #E7BC68.
- Typography: system font with scalable display, body, label, and button roles.
- Controls: 52-54 pt primary fields/buttons and at least 44 pt interactive targets on iOS.
- Layout: safe areas, keyboard avoidance, scroll fallback, portrait presentation, and a 480 pt maximum content width.

04 VERIFICATION

Build and UI evidence

CHECK	RESULT	EVIDENCE
Production JS bundle	PASS	Expo iOS export completed: 731 modules, 49 assets, 2.3 MB Hermes bundle.
Native simulator build	PASS	Xcode 26.6; Build Succeeded; 0 errors; 1 non-blocking duplicate -lc++ warning.
Packaged Info.plist	PASS	Portrait, Dark, skillomate scheme, ATS arbitrary loads false, no exception domain.
Packaged privacy manifest	PASS	Plist valid; 9 linked/non-tracking data categories; required-reason APIs retained.
Visual QA	PASS	ImageGen concept and final iPhone 17 screenshot inspected together for fidelity.
Dynamic Type	PASS	XXXL content size remained readable with controls and footer available.
Policy links	PASS	Maestro verified Privacy, Terms, account-deletion text, Support, and return to login.
Diff hygiene	PASS	JSON and plist validation passed; git diff --check returned clean.

Remaining portal and release work

- Enter a public Privacy Policy URL and matching privacy labels in App Store Connect.
- Provide a durable full-access demo account and clear review notes.
- Increment the iOS build number before upload and create a TestFlight archive.
- Validate videos, downloads, profile-photo permission, AI, account deletion, and membership restoration on a physical iPhone.
- Confirm rights for every thumbnail, course video, logo, and person depicted in listing media.

App Store upload note

The local candidate remains build number 12. Increment ios.buildNumber before the next App Store Connect upload.

Conclusion

The local iOS candidate is materially more App Store-ready and passed bundle, native-build, metadata, visual, accessibility, and policy-link checks. Submission still depends on accurate App Store Connect data, reviewer access, content rights, and a release/TestFlight validation cycle.
