

Swipe Without an Adjacent-Screen Preview

The root-tab swipe now treats the gesture as navigation intent only. The current page stays full-screen and stationary while the finger moves; the destination becomes visible only after a valid release.

PREVIOUS BUILD	NEW BUILD
The neighboring real screen moved into view during the drag.	No neighboring screen is shown during the drag.
Current and destination pages were animated horizontally.	The current page remains fixed; selection changes at release.
The bottom-nav color followed the visible preview target.	The bottom-nav color changes only after navigation succeeds.

Implementation changes

Removed live pager motion	Deleted the horizontal Animated.Value, destination translation, scaling, spring-back, and 190 ms slide completion path.
Preserved gesture quality	Kept horizontal-intent detection, distance and velocity thresholds, boundary handling, and protection for child carousels.
Invisible destination preload	Once horizontal intent is recognized, the destination screen is retained behind the active page at opacity 0. It can render assets without becoming visible beside the current page.
Single interactive page	Only the active page has opacity 1, touch handling, and accessibility visibility. Retained pages are non-interactive and hidden from accessibility.
Stable bottom navigation	The persistent bottom bar stays outside the page layers and reads only the committed active tab for its gold selection color.
Build and configuration	No dependency, native-project, app identifier, version, or build-number change. Source behavior changed in appcopyai/App.js only.

VERIFICATION

iOS Simulator QA Results

Environment: iPhone 17 simulator, iOS 26.5, Expo/React Native development build. Native UI validation used Maestro and simulator video because this surface is not a browser-rendered page.

CHECK	RESULT	OBSERVED EVIDENCE
Full swipe: Home to Explore	PASS	Explore search field became visible after release.
Reverse swipe: Explore to Home	PASS	Home Continue Learning returned after release.
Short swipe cancellation	PASS	Home remained selected and visible.
Horizontal carousel isolation	PASS	The Home lesson carousel kept the gesture; the root tab did not change.
Profile to Nex AI to Downloads	PASS	Both adjacent reverse routes rendered expected content.
Two-second slow-swipe video review	PASS	Home stayed full-screen throughout the drag; Explore appeared only after release with content preloaded.
iOS production export	PASS	731 modules bundled; Hermes output 2.3 MB.
Source whitespace validation	PASS	git diff --check completed without errors.
